                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WE THE LOCATION OF THE FOLIATION OF THE PROPERTY OF THE PROPER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ин                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zlateck The Chr                                                                                                                                                                                                                                                                                                                                                                                                                                  Conversion of interferon-inducing polypeptide precursor to active polypeptide - comprises use of interferon-i-beta-converting enzyme, useful for, e.g. enhancing cytotoxicity by killer cells (lbim 2; pages 14-15; 15pp; English. This is the amino acid sequence for the interferon-gamma (IFN-gamma) inducing precursor peptide, which is cleaved to form the active mature protein when it is in contact with interleukin-1-beta-converting enzyme (ICE). The polypeptide is used for inducing, e.g. production of IFN-gamma a useful biologically active substance, enhancing cytotoxicity by, and inducing the formation of killer cells. The polypeptide may potentially be used as an antiviral, antitumour and immunospathy ugent and as an antiseptic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W37740 standard; Protein; 193 AA.

The protein can also be used to induce i-Nammun production in cultured cells. The tragamma inducer strongly induces explotextion in necrosis factor (INF), may improve the effect (or reduce explotextion) adoptive immunotherapy in tumours. The DNA enroding this sequence on using monoclonal antibodies.
Example A 3-2; Page 36-37, 48pp, English.

A novel mouse protein (899559) induces interferon-gamma (IFN-dimma) produced by immunocompetent cells. Its sequence was deduced from that of a cDNA clone (132403) isolated from a mouse liver library. Recombinant IFN-gamma inducer protein can be produced in high yields using host cells, esp. Escherichia coli, transfermed with a vertor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein that induces damma interferon product is immunoccompotent cells - used e.g. as antiviral or antitumour agent, also induces cytotoxicity of killer cells claim 2: Page 22: 30pp: English.

This protein induces IFNgamma production is immunocompetent colls. The protein is useful is an intiviral.

27 The present sequence represents a novel protein from mouse liver cells.

28 Which induces interferer gamma (IFN yamma) production in immunocompetent cells. This protein enhances cytoloxicity of killer oulls and induces couls. This protein enhances cytoloxicity of killer oulls and induces cells. This protein enhances cytoloxicity of killer oulls and induces couls. This protein used as an antionocitic agent for antifummour frame iterate, an artificity of limitating antifacts, or antifummour cells and in the treatment of atopic of immune system diseases, e.g. asthma, and in the treatment of atopic of immune system diseases, e.g. asthma, consider the remarkers when formulated with interlevkin-3, it is also considered to treat leukopaenia and thrombottopaenia associated with redictively for the immunethers; if leukaenia and their diseases. When used to the immunethers in the patient of the shell of the cells of the immunethers of the patient when administered to the patient of fixerial in the patient of the patient of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Similarity Matches 156, Conserv

Mouse IL-18 protein fragment.
InterleukhilB. IL 18, murium, treatment, autoimmune diseinmunosuppressant; inhibitor; receptor protein; detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (HAYB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse interferon-gamma inducer protein.
Interferon-gamma inducer protein,
Interferon-gamma, IFM-gamma; antitytal; antioncotic; radiotherapy;
Immunoregulatory; antitumour agent; chemotherapy; leukopaenia;
thronto-ynopa-nia, immunocompetent cell, asthma; hayfever;
rheumatism; interleukin; killer cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              71 (00) Mutants of interferon-damma inducing polypeptide - useful as antitumour, antiviral, antimicrobial or anti-immunopathic agents claim 6: page 44: 59pp; English.

The present sequence represents the mutant mouse interferon-damma inducing factor mIGIF/MUT11. The wild-type mouse interferon-damma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Moting order interferencepames inducing factor NISHE, MOTIL: Interferencepamma inducing factor; interferencepamma, killer rell: Interferencepamma andivinal agent; antimicrobial agent; humour; mYNEF: hepatitis; malaria; tuboroulosis; renal carolnoma; rissmantism; AlNS: asteograficals. Thrumbelsedia. acquired immunosed factory syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      whenestive ecities, hyperthyroidism, autorismnuce hepatitie, systemic solutistics, priymycellis, leukepenia, rhomacyjd archritis, HIV intections, asthma, atopic dermatitis, and pollinosis. The products may also be useful in the creatment of septic shock associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a murine interleukin 18 (10.15) polypopt to the line 18 is a type of cylothest to 19.25 transduction in immune systems. The interleukin 18 receptor polypopt do non be used to neutralise interleukin-18 activity or to treat interleukin-18 receptor susceptive diseases, especially to treat autolimente or allergic diseases or as an immunosuppressant. Conditions which may be treated include e.g. graft or organ rejection, permicious anaemia, insulin-related diabetes, discoid lupus crythematosus,

Chair for present sequence represents the mutant mouse interferon-gamma or inducing factor midif/MUTI2. The wild-type mouse interferon-gamma or inducing factor and mouse interferon-gamma inducing factors in which one or more cysteine residues are replaced with different residues at or away or more cysteine residues are replaced with different residues at or away or more cysteine residues as hown in W4936 W49958. The mutant midiffs are obtained to be less texto, more active and stable interferon-gamma and are claimed to be less texto, more active and stable of interferon-gamma and are claimed to be useful as antitumour agents, antitumour formation, and may therefore be useful as antitumour agents, antitumour or immunotherapeutics, antitural agents and antimicrobial agents. But on mutant midiffs are also claimed to be useful for treating hepatitis.

Community dimmunodeficiency syndrome (AIDS), malaria, tubeliculais, solid on milignant tumours (e.g. renal carcinoma), theumatism, osteoporosis and thrombour process and chemo-therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-SEF-1998 (first ontry)
Mutant mouse interferon-gamma inducing factor miolF/MUILZ.
Interferon-gamma inducing factor; interferon-gamma, killer cell;
antitumour agent; antiviral agent; antimicrobial agent; thusmar:sm. AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W48969;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      terbeckin 18 to inhibit extendest formation t in treatment                                                                                                                                                                                                                                              quantitating stress in a mammal Claim 6: Page 33: 47pp. English.

This is the amino acid sequence of the rat interferon-gamma inducion factor (IGIF) isoform, also known as interleukin-18-alpha (II-18-alpha). It can be used to transform a cell, which upon its expression can cause the cell to produce rat IATF, i.e. IL-18 or IL-18 alpha. It is made by the deletion of 57 bases (860-417) from V20875, a probable exp. The antibody to IGIF Jond probes derived from it, are useful for detection of II-18 or II-18 alpha process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of the rat interferon-yamma inducing factor (IGIF), also known as interleukin-18 (IL-18). It can be used to transform a cell, which upon its expression can cause the cell to produce rat IGIF, i.e. IL-18 or IL-18 alpha. The antibody to IGIF, IGIF and probes derived from it, are useful for detection of IL-18 or IL-18 alpha present in a sample. The amount of IL-18 or IL-18 alpha in a sample can be used to quantitate stress in a mammal.
                                                                                                                                                                           can be used to quantitate stress in a mammal. Sequence 175 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      factor sequence is shown in W4899. The invention provides for mutant human and mouse interferon-gamma inducing factors (IGIE) in which one or more cysteine residues are replaced with different residues at or away from the consensus sequences shown in W48956-W4898. The mutant IGIEs are capable of stimulating immunocompetent cells for the production of interferon-gamma and are claimed to be less toxic, more active and stable than the corresponding wild type interferon-gamma inducing factor. The mutant IGIEs are also claimed to enhance killer cell cytotaxicity and/or induce killer cell formation, and may therefore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         be useful as antitumous agents, antitumous immunotherapeutics, antiviral agents and antimicrobial agents. The mutant IGIFs are also claimed to be useful for treating hepatitis, acquired immunodeficiency syndrome (AIDS), malarja, thermatism, usteoporosis and thrombopenia caused by radiation—and chemo-therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mutants of interferon-damma inducing polypeptide - useful as antitumour articizal antimerobial or anti immunopathic agents claim 5: page 41: 59pc.

Their present sequence represents the mutant human interferon-gamma inducing factor [GIF/MUI21]. The wild-type human interferon-gamma factor sequence is shown in W48959. The invention provides for mutants of the sequence is shown in W48959.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eccation/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                 Protein that induces gamma interferon product in immunocompetent process: used e.g. as antiviral or antitumour agent, also induces provide the liver cells. The protein terferon gamma (Fryamma) inducer protein CC of the invention. This protein induces IFNyamma production in CC immunocompetent cells. The protein is useful as an antiviral, antitumour, antitumour, antitumour protein is useful as an antiviral, or it can be used in a preventing AIDS, condyound aduminatum, or it can be used in the protein can also be used to induce IFNyamma production in CC altery The protein can also be used to induce IFNyamma production in CC cultured cells. The Higherma induces fungishes the protein can also be used to induce IFNyamma production in CC cultured cells. The Higherma induces forced to induce IFNyamma production in CC cultured cells and when ised with intelleuking (IL-2) and timbur adaptive the protein unious. The DNA enoughed the effects of adaptive immunotherapy in tumours. The DNA enoughed the effect can using monocloud antibodies.
                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                          Matches

Recombinant IFN-gamma inducer protein can be produced high yields using host cells, esp. Escherichia cell; transformed with a vector carrying the encoding cNNA (7324-2). It is useful as an antiviral, antitumer, antibacterial, immanoremulatory and blood platelet enhancing agent, and can be used in adoptive immunotherapy. It is also used to raise monoclanal antibodies.                                                                                                                                                                                         Example A 3-2; Page 36-37, 48pp, English.

A novel mouse protein (P99550) induces interferon-gamma (IFN-gamma) prodn. by immunocompetent cells. Its sequence was deduced from that of a cDNA clone (T32403) isolated from a mouse liver library.

Recombinant IFN gamma inducer protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a vector

Marine grotein for induction of interferon-gamma.
Interferon-gamma; immunocompetent cell; malignant tumour;
"'''' A'sease, bacterial infection; immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The matter outline of a momel began protein (P00560) induces interferon damma (IEV damma) prode, by immunocompotent cells. It is the ground if a DNA blone (I32.04) obtal from a human liver library. The protein enhances the cytotoxicity of killer cells and/or indices the formation of killer cells (e.g. NK cells, and/or indices the formation of killer cells (e.g. NK cells, and/or indices the formation of killer delis and cytotoxic T-cells) immunotable as an antivital induced a superficial inducery and blood platelet combancing agent and can be used in adoptive immunotherapy. It is also accept that is an accounted to a continuous continuous acceptable in acceptable in acceptable in a combancing agent and continuous acceptable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WITT STB.

This proble sequence represents an interferon gamma inducing factor-2 (188-2) for the Sequence at iver cDNA library. This sequence divers it as 1815 2 (dontified from a T-lymphocyte cDNA library (W22047). A fact there is 1814 is found to be changed from Arg to Ile. A second right and the sequence of the second sequence is a sequence in the second representation of IGF-2 in conditions have a second with interest of with a recursion of a second representation of the second representation of the second representation of the second representation of the second representation of activity. The profession seed to discusse, prevent or treat IGF-2 induction is possible to the second representation of factor of the second representation of t

It is used as an of killer cells and induces their formation. It is used as an antiviral independent for antifumeur immunotherapy, an antiviral (including anti-AIDS) or antibacterial assumed in the treatment of atopic or commune system diseases, e.g. asthma, hayfever or rheumatism, when thromotherapy of introphenic assumitated with interleukin-3, it is also used to treat leukopaenia and commune system diseases. When seld in anti-Locus Immunotherapy of thromotherapy of its anti-present assumitated with radiatherapy or clumbatherapy of thromotherapy of thromotherapy of this novel present significantly improves the immunotherapeutic of alone, either when administration is the patient (before administration of the patient) are being parties to the patient and for return to the patient of anti-present and for return to the patient and for return to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ouery Match

The present seprence represents a sivel protein firm hash relia, which in here liberthere james (TEX james) production in here represents the first include the restriction of interest liberthere in the set of an artificial firm and induced their regions and in the treatment of atopic or lemana system diseases, eq. asthmatic and in the treatment of atopic or lemana system diseases, eq. asthmatic hayfever or rheumatism, When formulated with interleables, it is also used to treat leukspacenia and formulated with interleables. When used in antitumous lemanatherap, this novel protein similificantly improves the formulation of the stheri settles (it.) compared with interleables and other called the settles of interleables (it.) compared with use of the solute status of the patient, before administration of the patient, before squence 157 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       83383383383333333

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1.8.4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indicase with the problem interferon gamma. Human IL-1-gamma and mouse with the bow like identity at the nucleotide level and set xim to a factority at the amino and level. Antagonists of large with the problem in the amino and level. Antagonists of the inagonist with the set in the antibodies can also be used in a method for treating a set into makes the best in the interferon or the antibodies can also be used in an attention in the interferon and the fusion to include an incident problem and the fusion to incide a problem and the fusion the set of problem and the fusion to an incident a protein include immunological disorders, allerdies, not inference the crotein include immunological disorders, allerdies, the other assess. The IL-1 damma can also be used to detect the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LitterN-16 (1) Anthony (1) Anthony (1) Anthony (1) Anthony (2) Anthony (3) Ant

                                                                                                                                                                                                                                             This polypeptide induces IFN yamma production in imministropy tent relis (the polypeptide is not named but is described in the 277a/7a and 193785-78.) An engine in the release the presents form of this polyperide into this active form by cleaving a linkage between Asp at amino acid positive 18 and Tyr at amino acid position 37 at the precursor. The compute can be obtained from a human hasmatopelete relia and can be inhibited by independed and acetyl-fityresyl-fivelyl-fitalanyl-fit aspartified. The engine can be used for cleaving a recombinant HN-damen propolypeptide to form a mature polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-JAN-1998.

A.Title: Complete genome sequence of the methanogenic archaeon, Methanocorous
A:Reference number: A64300: MMTD:06337999
A:Accession: C64438
A:Status: preliminary; nucleic acid sequence not shown; translation not shown
